

Communications Platforms/HiPath OpenOffice

HiPath OpenOffice

HiPath OpenOffice is a unified communications solution that incorporates the latest in internet voice technology. It has been designed specifically for small and medium enterprises from 20 up to 150 users and because it uses genuine open standards, it integrates seamlessly into your existing IT environment. There's no need to rip and replace; HiPath OpenOffice is easy to install, use, administer and maintain.

HiPath OpenOffice has the latest applications that make it possible to have Presence capability, Conference Management, One Number Contactability, Voicemails as well as the usual HiPath features all in one box.

Presence – Lets everyone set their availability so you'll know if someone is in a meeting, on a phone call, when they'll become available and the best way to contact them. If you're out of the office you can even update your availability via your phone.

Conference Management – Schedule your conference calls, create a dial-in or ad-hoc call on the fly by simply dragging and dropping participants from your directory. It's all handled through HiPath OpenOffice, so no conference call charges and productivity is improved.

Microsoft Outlook™ Plug-in

Because HiPath OpenOffice integrates seamlessly with Microsoft Outlook™, everyone can access all their communications via a single screen. Email, voicemail, fax and instant messages can be viewed, managed and answered from the application they're most familiar with.

HiPath OpenOffice Features;
